Using modern high power computing techniques it is now possible to simulate welding processes quickly and efficiently. These computer simulation and models are tools to help welding engineers apply their creativity, expertise and skill to be more productive and innovative when developing solutions to welding challenges such as distortion, weld sequence planning, control of residual stresses, surface hardness, crack avoidance, buckling, and other such issues.

Mahyar Asadi is a Professional Engineer and holds a PhD in welding, specializing in welding simulation and modeling, fracture mechanics and failure. His background includes Material Science and Engineering, and working experience a variety of projects ranging over automotive, energy, aerospace, oil and gas and heavy machinery fields.
